

Order Entry Database Background

The Order Entry database is used for extra problems in modules 4 and 5. This document describes the tables and relationships.

Table Description and Usage

The Order Entry database is an extension of the order entry tables used in the extra problems of Module 3. Table 1 lists the meaning of each table and Figure 1 shows the Oracle database diagram. After the relationship diagram, sample rows and Oracle CREATE TABLE statements are shown for each table. In addition to the other documentation, here are some notes about the Order Entry Database:

- The primary key of the *OrdLine* table is a combination of *OrdNo* and *ProdNo*.
- The *Employee* table has a self-referencing (unary) relationship to itself through the foreign key, *SupEmpNo*, the employee number of the supervising employee. In the relationship diagram, the table *Employee_1* is a representation of the self-referencing relationship, not a real table.

Table 1: Tables of the Order Entry Database

Table Name	Description
Customer	List of customers who have placed orders
OrderTbl	Contains the heading part of an order; Internet orders do not have an employee
Employee	List of employees who can take orders
OrdLine	Contains the product detail parts of orders
Product	List of products that may be ordered

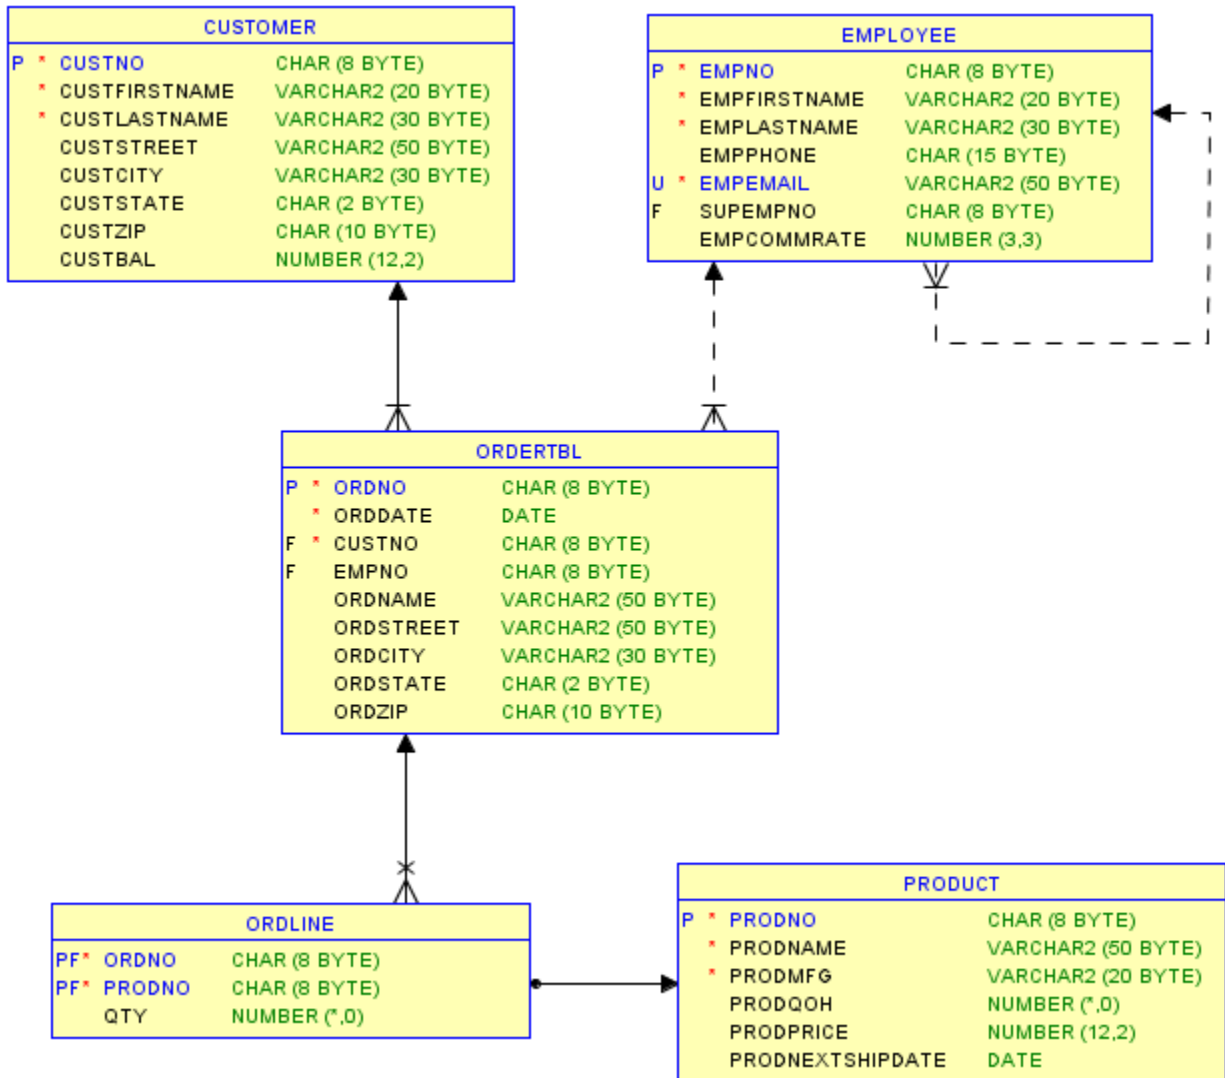

Figure 1: Oracle Database Diagram for the Order Entry Database
